EXTRUSION Troubleshooter - Plastics Touchpoint

Extrusion is a process used to create objects of a fixed cross-sectional profile. A material is pushed through a die of the desired cross-section. The two main advantages of this process over other manufacturing processes are its ability to create very complex cross-sections, and to work materials that are brittle, because the material only encounters compressive and shear stresses.

How to make DIY Filament for your 3D Printer. Nowadays one of the biggest drawbacks in 3D printing is the relative high cost of filament, i.e. the 3D printer (thermo-)plastic, the "consumable" for your 3D printer. Prices for 3D printers have been continuously dropping, but filament prices did not really follow the same path.
