

### **foundations in permafrost and pdf**

Permafrost is soil, rock or sediment that is frozen for more than two consecutive years. In areas not overlain by ice, it exists beneath a layer of soil, rock or sediment, which freezes and thaws annually and is called the "active layer". In practice, this means that permafrost occurs at an mean annual temperature of  $\hat{\sim}2 \hat{\text{A}}^{\circ}\text{C}$  (28.4  $\hat{\text{A}}^{\circ}\text{F}$ ) or colder.

Drunken trees, tilted trees, or a drunken forest, is a stand of trees displaced from their normal vertical alignment.. This most commonly occurs in northern subarctic taiga forests of black spruce (*Picea mariana*) under which discontinuous permafrost or ice wedges have melted, causing trees to tilt at various angles.
