GLACIAL ISOSTASY AND RELATIVE SEA LEVEL: A GLOBAL FINITE ELEMENT MODEL W.R. PELTIER, W.E. FARRELL and J.A. CLARK ... We review the subject of glacial isostatic adjustment and the structure of global models which have been developed to describe this phenomenon. ... Models of glacial isostasy have two basic ingredients: (1) an assumed deglaciation ...

In this regard, we provide a robust paleo-sea level elevation data set, corrected for glacial isostatic adjustment, that can be used to evaluate predictions from mantle flow models of dynamic topography.

Glacial rebound and sea-level change in the British Isles Kurt Lambeck Research School of Earth Sciences, The Australian National University, Canberra ACT 2601, Australia ABSTRACT Observations of sea levels around the coastline of the British Isles for the past 10,000-15,000 years exhibit a major regional variation and

Glacial rebound and sea-level change in the British Isles

Post-glacial rebound ... Post-glacial rebound and isostatic depression are phases of glacial isostasy (glacial isostatic adjustment, ... through the processes of ocean siphoning and continental levering, the effects of post-glacial rebound on sea level are felt globally far from the locations of current and former ice sheets.

Post-glacial rebound - Wikipedia

Introduction Glacial isostasy is the process of lithospheric depression beneath the weight of an ice sheet and subsequent rebound when the ice mass is reduced or removed. Glacial eustasy, on the other hand, refers to worldwide changes in sea level as a consequence of changing volume of glacier ice on land. Both glacial isostasy and eustasy, thus, are related to the volumeâ€™thickness and areal ...

When the term relative is used in context with sea level change, the implication is that both eustasy and isostasy are at work, or that the author does not know which cause to invoke. Post-glacial rebound can also be a cause of rising sea levels.

Isostasy - Wikipedia

Glacial Isostasy. When ice sheets melt, the resulting sea level change is spatially variable because of the deformation of Earth's surface under the time-dependent ice and water load and because of the changing gravitational potential of the Earth-ocean-ice system.
