It involves three types of algebras, that is three operads: Com for the coalgebra structure, As for the algebra structure, and Lie for the structure of the primitive part. The purpose of this talk is to show that there are numerous other examples of this form, many of them already in the literature.

Higher Structure in Geometry and Physics

Higher categorical structures in geometry The following situation arises frequently in mathematics and mathematical physics: for a given smooth, n -dimensional manifold M we want to consider certain classes of geometric objects on M . The reader should keep in mind structures like metrics

Title: Transverse Poisson Structures and Kleinian Singularities Abstract: We give a brief general review of the ADE classification problem. The survey includes simple Kleinian singularities, symmetries of Platonic solids, finite subgroups of $SU(2)$, the McKay correspondence, integer matrices of norm 2 and Brieskorn's theory of subregular orbits.

Higher Structures in Geometry and Physics. These higher algebraic structures provide a common language essential in the study of deformation quantization, theory of algebroids and groupoids, symplectic field theory, and much more. The ideas of higher homotopies and algebraic deformation have a growing number of theoretical applications...
